In the Abstract:

Following the claims, please add the abstract as follows:

–Abstract of the Disclosure

This invention relates to a method, a computer program product, devices, a system and a session description protocol for transferring data (101, 106) and information on associated data asset information, comprising providing (307) session description information (110) that at least partially contains the information on the data asset information, wherein the session description information (110) obeys a first protocol, transferring (309) the session description information (110) to a destination instance (301) based on a second protocol (107, 109, 102), and transferring (313) the data (101, 106) between a source instance (305) and the destination instance (301) within a transfer session and based on a third protocol (102). The first, second (107, 109, 102) and third (102) protocols are preferably the Session Description, Real-time Streaming and Real-time Transport Protocol in a 3G Packet-Switched Streaming Services context.
